

## ISO 14001 CERTIFICATION & EMAS REGISTRATION

**ISO 14001** specifies the requirements for an **environmental management system** that an organization can use to enhance its environmental performance.

ISO 14001 is intended to be used by an organization seeking to manage its environmental responsibilities in a systematic manner, in order to contribute significantly to environmental sustainability.

**The EU Eco-Management and Audit Scheme (EMAS)** is a premium management instrument developed by the European Commission for companies to evaluate, report and improve their **environmental performance** and provide stakeholders with information on their environmental management.

It is one of the voluntary instruments activated under the Fifth Environmental Action Programme.

**SUANFARMA Italia** has always adopted a policy of **strong responsibility** toward **environmental objectives** and the implementation of ISO 14001 & EMAS Registration has helped us to achieve the intended outcomes of our environmental management system, which provide **value for the environment**, the **organization** itself and its **stakeholder**.

Consistent with SUANFARMA Italia's environmental policy, the results expected from an environmental management system include:

- enhancement of environmental performance;
- fulfilment of compliance obligations;
- achievement of environmental objectives.
