

ISO 50001 CERTIFICATION

ISO 50001 specifies requirements to implement and improve an energy management system (EMS). The objective is to allow a company to pursue, with a systematic approach, the continuous improvement of its energy performance.

In addition to ensuring lower energy consumption costs, ISO 50001 has other advantages:

- it is a support for organizations in optimizing their energy consumption activities
- is transparent and facilitates communication on energy resource management
- identifies best practices in energy management
- supports the selection of new energy efficiency technologies to be applied
- is the tool to improve energy management to reduce greenhouse gas emissions
- enables integration with other organizational management systems, such as environment, health and safety.

The achievement of this important certification goes in the direction taken by SUANFARMA Italia since its foundation. **Energy** and **environmental sustainability** are in fact only two of its distinctive features.

SUANFARMA Italia focuses on **efficiency** both from the point of view of products and infrastructures, taking a decisive step towards the logic of responsible entrepreneurship of which it wants to be a spokesman.

Technological know-how, production flexibility and the ability to offer a wide range of products represent fundamental strengths of the company in a **highly specialised sector** where demand is constantly evolving and increasingly oriented towards products that guarantee absolute reliability and safety.
